THE NURSERIES

**BATH.**

## A Few Hints on their Culture.

WHEN the plants are received from the Nursery, they should, if the weather is not frosty, be unpacked at once and the roots and tops wetted; if the ground is ready plant at once, taking only a few at a time out of the shelter, so that the whole lot may not be exposed for any length of time to cold drying winds.

**SITUATION.**—A place apart from other flowers should be assigned to Roses, if possible. Oblong beds not over 4-ft. wide are the best, as the flowers may be cut and examined without treading on the beds. The situation should be an open one, though not exposed to high winds and currents. The south-east or south-west aspect is best, the beds being situated so as to receive the morning sun; roses like a free circulation, but are injured by cold draughts; on the other hand, closeness is apt to generate mildew.

**SOIL.**—That which they especially delight in is a rich fibrous loam that feels greasy when pressed between the fingers; where this is not to be had the soil should be improved—if light, by the addition of loam or even clay well worked in; where heavy, good drainage and the addition of charcoal in small quantities will help it, but in such places drainage is most important. The ground should be deeply trenched, well rotted animal manure being plentifully added; if the soil be old garden soil, add good fresh loam, rich and yellow; if heavy clay, some burned earth, road sand, or leaf mould should be added. For Briars the loam if somewhat adhesive in quality will be all the better.

**PLANTING.**—Choose a fine day for the operation; rather than plant when the ground is very wet lay the plants in for a day or two and wait. Dwarf or Rose Bushes should be planted with the collar of the bud or point of union with the stock, at least two inches below the surface of the soil. Standard Roses should not be planted too deep—a few inches depth of soil above the roots is sufficient; but firmly stake each tree to prevent the wind rocking it, this last operation is essential to success. When planted amongst other subjects in the borders, a hole should be made about 18-inches deep, and large enough to contain half a wheelbarrowful of a compost of two-thirds strong turfy loam (if it can be procured from an old pasture it is preferable) and one-third well decomposed animal manure, in the midst of this the tree should be planted and trodden in firmly; a little sandy mixture near the roots induces fresh fibre.

**WATERING.**—Should dry weather follow planting, let the trees have a good soaking of water, and syringe the tops; especially is this necessary with those planted in spring. Large numbers which die every year from the effects of drying winds would be saved if care were taken in watering and syringing as here recommended. When coming into bloom, if weather is dry, give a good soaking once or twice a week, and at this time liquid manure may be used with advantage.

**MANURING.**—Roses are gross feeders, and will take almost any amount of manure. A layer six inches deep of half-decayed hot-bed manure laid on the beds in November and forked in the following Spring, is an excellent dressing; cow and pig manure, when available, is also good.

**PRUNING.**—This should not be done at the time of planting. If the trees are planted in the Autumn March is the best month; if Spring planted April will be sufficiently early; the latter month is also the best for pruning the Tea-scented and Noisette kinds. The strength of the shoot must determine the extent of the shortening—if vigorous, leave it much longer than that which is weak; as a rule the stronger kinds should be left 12 to 18 inches long with 5 to 6 eyes, the weaker growing 6 inches with 2 to 4 eyes; these remarks apply mostly to Hybrid Perpetuals. Tea-scented and Noisette Roses should only have the weak growth thinned out and the strong shoots topped. The Summer varieties of Moss Roses should be only sparingly pruned. Do not let established plants of any kind of Rose become crowded with branches, but carefully thin out all small and unripened wood. In all cases prune to a bud pointing outwards.

# COOLING'S SOMERSETSHIRE Collections of Rose Trees

Either of the following Collections, large or small, will be forwarded **Carriage and Packing Free** to any Railway Station in England or Wales upon receipt of P.O.O. or Cheque for the amount quoted.

These assortments are offered for the convenience of the large number who are not acquainted with the great variety of Roses now in cultivation and who are at a loss when selecting from the Catalogue. The prices quoted are considerably less than if the kinds were individually chosen; but growing large quantities of what we know to be the very best varieties we are enabled to include them at the lowest price. The Collections have been very largely sold during past years, and give very great satisfaction.

**The Selection of Varieties must in all cases be left to Ourselves;** purchasers selecting their own varieties will be charged the individual price for each kind as quoted in the Catalogue. But in ordering, if customers will send a list of the sorts they already have a distinct selection shall be made; and if the nature of the soil and situation is also mentioned only the most suitable kinds will be included.

# NEW ROSES OF 1909.

We take great care to select and offer only what we consider the best of the New Roses, and we think in the following list will be found the choicest and most distinct of those introduced during the season of 1909. Varieties of the past season are printed in bold type in the general list.

The descriptions given are those of the raisers.

Each.

- 3 6 .. **AMERICAN PILLAR**. [Conard, 1909.] A new single rose, flowers 3 to 5 inches across, colour a chaste shade of pink with bright yellow stamens in the centre, followed in the autumn by pretty brilliant red seed hips.
- 2 6 .. **ALBERT JAMES NOTTIDGE** [N. Welter, 1909] H.T. Brilliant crimson, well formed upright flowers; a seedling from **CAROLINE TESTOUT** crossed with **ALFRED COLOMB**.
- 2 6 .. **ALBERTO N. CALAMET** [Soupert et Notting, 1909]. Pink, soft flesh white inside petals, fine long buds. Highly recommended by the raisers either for exhibition or bedding.
- 7 6 .. **ALTHEA** [W. Paul & Son, 1909] H.T. Beautiful opaque salmon pink, outside of petals flushed rose, of charming effect and most handsome as a decorative rose.
- 2 6 .. **ALINE SCHNEIDER** [Nollent, 1909] T. Canary yellow, with deeper centre, large and double and very sweetly scented.
- 3 6 .. **ARTHUR R. GOODWIN** [Pernet Ducher, 1909] H.T. Coppery orange red passing to salmon pink as the flower opens, fine reddish green foliage; very distinct and promising.
- 2 6 .. **BAGATELLE** (Rambler) [Soupert et Notting, 1909]. White, with soft rosy shadings, new colour; very vigorous and free.
- 2 6 .. **BEATRICE** [W. Paul & Son, 1908] H.T. Deep rich pink shaded vermilion, outer petals flesh, finely recurved.
- 2 0 .. **CHIN-CHIN** (China). Clear sulphur yellow, perpetual blooming; a sport from **MADAME E. RESAL**; good.
- 2 6 .. **COMMANDANT C. J. GRAVEREAUX** [Cribier, 1909] H.T. Fiery crimson, lightly shaded velvety maroon, purple in centre; a seedling from **F. K. DRUSCHKI**; a valuable acquisition.
- 2 6 .. **COQUINA** (Wichuraiana Rambler). Single, porcelain pink with yellow base, a delightful shade of colour; very neat habit.
- 7 6 .. **COUNTESS OF ILCHESTER** [Alex Dickson & Sons, 1909] H.T. Warm crimson-carmine, very free and continuous in flowering, of large size. With massive petals, very vigorous and most attractive, and handsome deep green foliage.
- 7 6 .. **CYNTHIA** [W. Paul & Son, 1909] H.T. Lemon shaded with white, extra large and full, in the way of **KAISERIN AUGUSTE VICTORIA**, but of much better habit and growth.
- 5 0 .. **DOROTHY DENNISON** [Alex Dickson & Sons, 1909] Wich. A sport from the well known variety **DOROTHY PERKINS**; of a lovely shell-pink shade, the base of petals being creamy white. The raisers claim that this is the best of all the sports obtained from the parent variety.
- 7 6 .. **DUCHESS OF WELLINGTON** [Alex Dickson & Sons, 1909] H.T. Intense saffron yellow, stained with rich crimson, which becomes deep saffron yellow as the flower develops; it resembles in substance the well-known **KILLARNEY**, and is of delightful fragrance.
- 2 6 .. **ELAINE** [W. Paul & Son, 1908] H.T. Palest lemon white; the buds slightly tipped with flesh pink and rose; petals reflexed; very free flowering and therefore a most attractive decorative variety.
- 3 0 .. **ENTENTE CORDIALE** [Guillot, 1909]. Nasturtium red on golden yellow ground, reflex of the petals salmon yellow; good.
- 2 6 .. **EVA DE GROSSOUVRE** [Pierre Guillot, 1909] H.T. Salmon carmine or soft salmon pink, very large double and globular; seedling from **BELLE SIEBRIET**.
- 5 0 .. **FAIRY** [W. Paul & Son, 1909] Rambler. Single, snow white flowers produced in large clusters lasting a long time in good condition and continuous in flowering; a valuable addition to the Rambler section.
- 7 6 .. **F. R. PATZER** [Alex Dickson & Sons, 1909] H.T. Creamy buff, back of petals delicate warm pink; as the petals reflex the colour becomes rich orange pink; a most charming combination, highly perfumed, distinct and good.

*Our Prices for New Roses will be found to compare favourably with those of any list. We are offering many of the Continental varieties at reduced prices.*

## BRIAR ROSES.

The Austrian and Persian Yellow Briars are amongst the most beautiful and distinct of all the old fashioned Roses ; they are perfectly hardy, and should be allowed to grow wild with scarcely any pruning ; this is necessary, as they always flower upon the ripened wood of the preceding year's growth. We also suggest these Briars being grown as Pot plants ; plants with long shoots potted up in autumn flower freely in spring, and are exceedingly novel and pretty amongst plants in the conservatory.

# FRUIT TREES.

THE following is a very select list, comprising the most reliable and best known varieties in their respective classes. Any variety not mentioned can be supplied, if notice of a day or two be given.

Purchasers will greatly oblige if they will add to their orders a few supplementary names which we may use if any of the first-named are sold out.

We would also suggest to those of our patrons who have not an intimate acquaintance with the various kinds of Fruit Trees, that it would be to their advantage to leave the selection of varieties in our hands, stating the purpose for which the Trees are required, the aspect in which they are to be planted, and the nature of the soil. In this case they may be assured their confidence will not be misplaced, as the selections will be made with the best judgment and care.

*The varieties printed in large type can be specially recommended.*

# THE LOGANBERRY.

(Received Award of Merit, R.H.S.)

This fruit is an entirely new departure, being a true hybrid between the red Raspberry and Blackberry perfectly hardy, having stood in an exposed position without any protection, the temperature below zero, and coming through the winter without injury. The berries are very large, deep reddish maroon in colour. They are rich in flavour, being a delicious mingling of the Raspberry and the Blackberry, are melting, and without core, a beautiful fruit for dessert, making also a first-class jelly or jam. This new fruit is rapidly growing in popularity, it will grow almost anywhere, and gives an enormous amount of fruit.

**DUKE OF YORK.** Bright rosy pink, with large brown spots on the copper petals, very free flowering.—5/-

**WHITE PEARL.** A charming companion to the above, producing large trusses of white flowers, faintly flushed with palest pink, foliage of a rich green; fine for forcing.—5/- and 7/6 each.

**HELEN PAUL.** Soft peach, with the petals tipped and margined with pink, large truss freely produced on young plants; most distinct and good.—5/- and 7/6 each.

**Mrs. CHARLES BUTLER.** White with bluish tint, deliciously scented.—5/-.

## New Climbing and Pillar Plants.

We offer here a few distinct Climbing Plants of recent introduction, which are worthy of attention; the new *Vitis*, introduced from China by Messrs. Veitch, and the new *Ampelopsis* are valuable additions to our hardy climbers.

**AMPELOPSIS HENRYANA.** A beautiful new Virginian Creeper; the leaves are charmingly variegated with silvery white and rose.—2/-.

**AMPELOPSIS LOWII.** A lovely new variety of *Ampelopsis*, raised by Messrs. Low; the leaves are only about half the size of *A. Veitchi*; are in Summer of a dark metallic green, brightening to a fresh apple green towards the extremities, changing with the season to a warm tint in Autumn; the leaves are small, beautifully dentate and the edges are prettily crimped. A charming variety.—1/6 and 2/6.

**CLEMATIS—LADY NORTHCLIFFE.** Deep lavender, tinted bright blue, with purple bar, and white stamens, good grower; free and distinct. Award of Merit, R.H.S., 1906.—2/6.

**CLEMATIS MONTANA RUBENS.** A valuable introduction, being a coloured form of the well-known *Montana*; the flowers are soft, rosy red in colour, freely produced, and a charming contrast to the old favourite white variety. **Strong Plants, 2/6.**

**VITIS ARMATA VEITCHII.** The finest decorated Vine ever distributed, succeeding well in any situation. The autumn tint of its large leaves is a rich crimson lake with a magenta shading, whilst during summer they present a shining bronzy green appearance.—2/6 and 3/6 each.

**VITIS MEGALOPHYLLA.** A remarkable Chinese species of *Vitis*, the leaves are 2 to 3ft. across, dark green on the upper surface, pale glaucous green beneath; of rapid growth, making stems 8 to 10ft. in a season. This is a most valuable addition to our climbing plants.—3/6 and 5/-

**VITIS REPENS.** A fine hardy ornamental Vine; it is self clinging and a very strong grower. The young growths are bright brown in colour, the young leaves being of a reddish brown on the upper surface and deep claret colour underneath. The old leaves have a peculiar velvety appearance.—2/6 and 3/6 each.

**VITIS THOMSONII,** a charming species with purplish foliage and stems. The leaves are greenish purple in colour above, bright claret purple beneath, changing in Autumn to purplish red; the growths are slender.—2/6 and 3/6.

*The new Climbing Plants offered above are worthy of attention, they are very distinct and good.*

# CLEMATIS.

These hardy and easily cultivated climbing plants should be found a place in every garden ; whether used for covering old walls, verandahs, rustic poles or pillars, or for bedding, they are unsurpassed. Nothing produces so grand and gorgeous an effect as a well-flowered bed of the beautiful varieties of *Jackmanii*, which produces their rich deep-coloured flowers in great profusion throughout the summer and autumn.

The only secret of success in growing them is a good rich soil ; an annual mulching should be given of horse or cow manure, and during the growing season, a few liberal soakings of liquid manure.

## Collections of Clematis.
